Download

guab: you have some extra firmware WsS: Read the steps you were already given. i try to install a restricted driver and there is no way to know what it does it could be locking something up Gentoo64, what should I do? the people using one of the older kernels should just use that if they are familiar with it and will try to use the 'upstream' kernel, they can remove the extra firmware guess remove it then Gentoo64, i've tried that and Gentoo64, and it hangs at boot i need a way to stop the process Gentoo64: Lirth, i have ufw, and it hangs at boot guab: it hangs on boot, or after? Gentoo64, after guab: Do you have another firewall running? Gentoo64: For example, firestarter? Lirth, yes Gentoo64: It's annoying to have a boot time process running. Anyone willing to help me with terminal problems? z9hayk: define problems 'problems' Well !details | z9hayk z9hayk: Please give us full details. For example: "I have a problem with..., I'm running Ubuntu version.... When I try to do..., I get the following

output:..., but I expected it to do..." 82157476af
